

Also available with 12, 16, 18, 24, or 32 cells

FEATURES

- Meets IES standard RP-1 glare control recommendations on most models
- Ideal for today's computer intensive electronic offices
- Wide light distribution provides uniform illumination
- 4" deep low iridescent anodized aluminum louver
- UL listed 1598
- Mechanical light trap prevents light leaks
- Black reveal with full air handling capabilities
- Damp label standard
- NEC/CEC-compliant ballast disconnect standard

PROJECT INFORMATION

Project Name _____

Type _____

Catalog No. _____

Date _____

CONSTRUCTION

Luminaire housing is constructed of die formed code gauge cold rolled steel. Anodized aluminum louver is secured by die formed steel hinges. Louver can be hinged or latched from either side. A mechanical light trap prevents light leaks. Latches are positive acting finger-tip actuated and fabricated of spring steel. Surface mount luminaires are designed for compatibility with comparable recessed models. These luminaires require only minimal maintenance and match the performance of recessed parabolics. Fixture mounts easily and snugly to surface. No extraordinary hardware required for mounting.

INSTALLATION

A plastic dust cover which eliminates construction dust and protects the lamps is provided as standard.

LABELS & ELECTRICAL

All luminaires bear appropriate UL or CUL labels. Completely wired with standard class "P", thermally protected, autoresetting, HPF ballast. Sound rated A. All ballast leads extend a minimum of 6" through the access opening. NEC/CEC-compliant ballast disconnect is standard. Damp label is applied as standard.

FINISH

Painted parts are treated with a five stage phosphate bonding process and finished with a high temperature baked white enamel. For post painted housing, suffix catalog number with PAF. Regressed slots are flat black. Choice of low iridescent silver louver finishes.
