

FEATURES

- 5¾" deep troffer eliminates lens shadowing
- Contoured housing maximizes photometric performance with uniform lens brightness and no lamp striping on the lens
- Mitered corners on door present a clean uninterrupted appearance
- Full black reveal presents a floating door appearance
- Full air handling capabilities available
- Mechanical light trap prevents light leaks
- Heavy duty post-painted door frame enhances appearance
- Snug door fit eliminates light leaks

PROJECT INFORMATION

Project Name _____

Type _____

Catalog No. _____

Date _____

HOUSING

Fixture is constructed of die formed and embossed code gauge steel. End caps are hinged and riveted to the housing for added rigidity. Designed for installation in all ceilings as shown below. Specify exact ceiling type. Two T-bar clips are provided with each "grid" fixture.

BALLASTS

Energy efficient, thermally protected, automatic resetting, Class P, high power factor, sound rated A, unless otherwise specified. CEE NEMA Premium compliant.

ELECTRICAL

Standard class "P", thermally protected, auto-resetting HPF ballast, sound rated A. CEE NEMA Premium compliant. All ballast leads extend a minimum of 6" through access location. NEC/CEC-compliant ballast disconnect is standard.

FINISH

All metal parts are processed with a multi-stage phosphate bonding treatment and finished with a high reflectance baked white enamel. Regressed air slots and control vanes are finished in flat black. For a post painted housing finish suffix catalog number with PAF.

SHIELDING

Standard lens is a 100% clear prismatic acrylic pattern 12. For other available lenses consult lens option sheet or contact your Columbia representative. Steel or aluminum door frames are retained by steel hinges and spring steel latches. Door hinges and latches from either side of fixture and can be easily removed without tools. Door frames feature snug fitting mitered corner joints and are available in flush or regress design. All door frames are painted after fabrication. Doors are surrounded by a uniform black reveal. A mechanical light trap prevents light leaks.

AIR COMPATIBILITY

All units may be used for heated or cooled air outlet or return air vent in ceiling. Also may be used for direct air return to plenum of non-combustible construction. Fixtures are compatible with air diffusers by all major air boot manufacturers. Air removal options must be specified.

CERTIFICATION

All luminaires are built to UL 1598 standards and bear appropriate UL and cUL or CSA labels. Damp location labeling is standard. Emergency-equipped fixtures labeled UL 924.

DIMENSIONAL DATA

NOTE: All dimensions are in inches; dimensions and specifications are subject to change without notice. Please consult factory or check sample for verification.

CEILING COMPATIBILITY

For lay-in installation in exposed grid ceilings. Maximum tee widths of 1" and maximum tee heights of 1½" allowed.

For ¾" slot grid type ceilings. Louver will be level with the ceiling plane. Shoulder heights of tee or exact slot grid must be specified.

For tile, plaster or plasterboard type ceilings. Overlapping extruded aluminum trim conceals edges of ceiling opening. Wing hanger suspension system included. For row mounting, row information is required.

For metal pan ceilings "Fit-in" style extruded trim aligns with modular tile joints. Fixture is supported from concealed suspension and includes all adjustable wing hangers.

Flange kit rough in dimensions for single unit only: 12½" x 48½"
